

packaging machinery

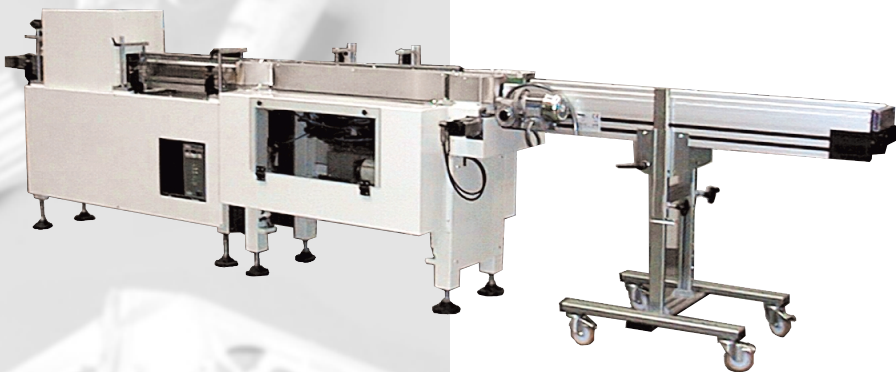

plastic lid Plastic lid applicator

Iman Pack's plastic lid applicator is designed to apply the lids onto the wrapping film or onto the finished flow-pack packages.

It guarantees 100% perfect alignment.

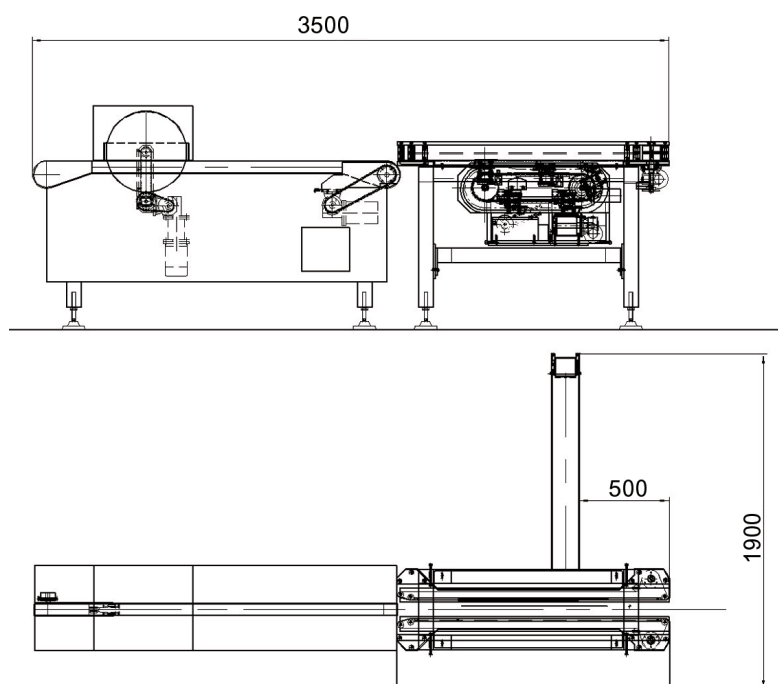

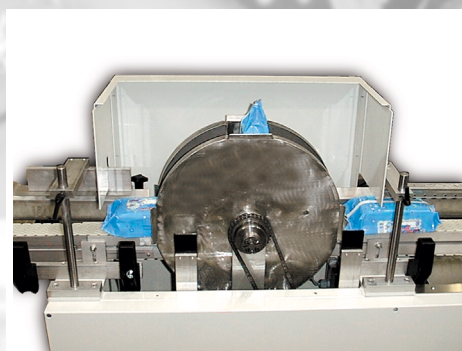

Plastic lid applicator onto the film

Self standing Plastic lid applicator
for finished flow-pack packages

Features and performances

- The lids are carried by the synchrony infeed belt into the vacuum unit.
- The vacuum unit collects the lids and carries them to the glue applicator.
- The glue applicator applies the hot melt glue by contact, using a rotary die, specially designed according to the dimensions of the lids
- After the lids are coated with hot melt glue, they are applied into the wrapping film
- The position of application can be adjusted as desired by changing the parameter into the keyboard.
- Thanks to the precision of synchronization, the lids are applied in perfect alignment
- The machine is driven by two servo motors: one for the synchrony infeed belt and the other for the vacuum unit
- The glue tank is automatically filled by the Nordson hot-melt unit

self standing lid applicator

The unit can be easily synchronized with top or bottom form, fill and seal machine

The accuracy of application will depend on the quality of the pillow pack.
